

DATASHEET

Nexetic Backup for Microsoft 365

Nexetic Backup is a powerful and reliable business-critical data and file backup solution. Designed and hosted in the EU, it is GDPR-compliant and ensures secure access to data even during a disruption.

96%

Companies have experienced business failure in the past 3 years

\$1,467

Loses business in 1 minute of downtime due to data loss

85%

Companies with backups recover after an attack without paying a ransom

TOP-5 REASONS FOR DATA LOSS

Human errors

Data loss due to accidental deletion or overwriting of files by the user.

Cyber attacks

Data loss due to attacks such as ransomware or leakage of confidential information.

Limited data storage policy

Automatic deletion of data after a certain time, if no retention is configured.

Software errors

Damage or deletion of data due to failures or errors in the software.

Data movement

Risk of data loss when moving from one platform to another or updating software.

WHY IS IT IMPORTANT TO BACK UP YOUR MICROSOFT 365 DATA AND FILES?

→ Advice from Microsoft

For all their advantages, cloud-based collaboration tools like Microsoft 365 occasionally fail. In particular, Microsoft is not responsible for data loss due to accidents and advises making backup copies.

→ Business continuity

Backups are a critical part of a disaster recovery plan, helping to ensure business continuity even after major incidents.

→ Minimizing downtime

Data loss can lead to prolonged downtime, which in turn can cause significant financial losses to a business. The availability of backup copies allows the company to recover faster after an incident.

→ Compliance with legal requirements

Many industries have legal requirements for data storage and protection. Backup helps you meet these requirements and avoid fines for violating them.

HOW WILL MICROSOFT 365 LET YOU DOWN?

Possible causes of failures

Technical malfunctions, system updates, or infrastructure problems can cause failures in Microsoft cloud services, resulting in temporary unavailability of services.

Risks

Failures in Microsoft 365 can lead to corruption or loss of data stored in the cloud. This can take anywhere from a few hours to days, depending on the complexity of the issue.

Advantages of Nexetic Backup

The M365 backup solution allows you to store backups outside of Microsoft's cloud infrastructure, ensuring data security and the ability to quickly restore it even in the event of failures caused by the company itself.

WHICH COMPANIES ARE AT RISK?

MAXIMUM PROTECTION OF YOUR DATA

Nexetic Backup is maximally integrated with Microsoft Azure, which provides reliable and sustainable data protection. The cloud platform offers a wide range of security features and certificates for the protection and integrity of data stored in the cloud.

Nexetic Backup uses Azure Blob Storage for data storage. After saving, the data in this storage cannot be changed or deleted, and this provides an additional level of protection against accidental data loss or the actions of intruders.

In addition, Nexetic Backup regularly performs security checks and vulnerability scans to identify and eliminate potential risks.

WHY DO YOU NEED NEXETIC BACKUP FOR MICROSOFT 365?

Microsoft Exchange Data Protection:

automatic copying of mail, built-in archive, shared folders, contacts and calendar.

Automatic backup:

is performed twice a day to ensure constant data security.

Full backup of OneDrive and SharePoint:

saving files, data from OneNote and Microsoft Lists.

Audit journal:

detailed record of all actions to improve control and security.

A single repository:

backup storage is shared by all M365 users.

Reserve Microsoft Teams:

copying files and messages in public and private channels, private chats and files.

Unlimited version history:

the ability to restore any version of files.

BASIC FUNCTIONS

Easy setup

- Just set up and running in 1 minute
- Ensures reliable backup of all important data and files
- No need to install any programs
- Only a web browser is required for setup

Full automation

- Fully automated maintenance that easily integrates with Azure Active Directory (AAD)
- Automatically backup all new users or users in selected AAD groups
- There is no need for manual monitoring or maintenance

Reliable backup

- Your data is always safe and the copying process is error-free
- Advanced technologies for timely backup of data and files
- Data is stored in Azure Blob, a reliable and secure storage

Instant data recovery

- The cognitive search function helps you find the data you need quickly and easily
- You can either restore or download your Microsoft 365 data
- A self-service portal enables users to restore data themselves
- Unlimited version history allows you to restore any previous version of files

Unparalleled scalability

- The solution is built based on Azure services using a serverless architecture
- Easily scalable and able to handle large amounts of data
- Optimized Backup copes well with the bandwidth limitation that Microsoft uses in M365
- Ideal for any business regardless of size and data volume
- Exceeds traditional solutions in terms of scalability

Advanced security

- For Nexetic, safety is a priority
- The solution based on Microsoft Azure is highly secure and compatible with many other platforms
- All data is encrypted using standard 256-bit AES encryption
- Azure complies with major international and European industry standards such as SOC 2, ISO 27001, GDPR, and NIS2

GET STARTED TODAY

M365 backup is a necessity for today's business. Its absence can be fatal because it will put your data, business, and reputation at risk.
