

CoPilot solutions

GenAI-based CoPilot: innovative security solutions from GFI Software

GFI Software has released several updates to improve and complement its products. GFI's CoPilot is a series of intelligent solutions that optimize the management of email security, network traffic, and other aspects of IT infrastructure. Using advanced artificial intelligence technologies, CoPilot provides rapid threat detection, adapts to changing conditions, and provides useful insights to improve your company's efficiency.

GFI KerioControl CoPilot: a new generation of intelligent firewall

1. Proactive security: analyzes network traffic and user behavior to predict potential threats.
2. Configuration and performance optimization: GenAI continuously evaluates network usage and suggests adjustments to improve security and performance.
3. Detailed reports and analytics: logs, configuration, and traffic data are analyzed to provide detailed reports on application access, traffic, blocked threats, and more.

GFI MailEssentials CoPilot: powerful protection for your email

1. Automated quarantine: GenAI determines whether emails in quarantine are legitimate and releases them if they pose no threat.
2. Adaptive DLP (Data Leakage Prevention): GenAI dynamically adjusts content filters to protect sensitive corporate information.

GFI LanGuard CoPilot: faster personalized protection

1. Faster response to threats: GenAI instantly analyzes new and unknown risks.
2. Effective protection of critical points: optimized remediation of vulnerabilities for critical resources.
3. Simplicity and convenience: an intuitive interface and an accessible assistant.
4. Flawless configuration: the configuration assistant ensures that there are no errors.

GFI Archiver CoPilot: automating email archives

1. Automatic tagging: GenAI checks email content for specific patterns and automatically assigns appropriate tags, simplifying search and archiving rules.
2. Natural language search: users can enter search queries in natural language, and GenAI processes the query by matching it with the exact search criteria in the archive.
3. Compliance: GenAI scans emails and tags them for compliance with certain regulations.

GFI KerioConnect CoPilot: enhanced content generation capabilities

1. Automatically generate a summary: GFI KerioConnect CoPilot turns long emails and notes into concise, easy-to-understand messages.
2. Instant translation: facilitates communication for multilingual teams with built-in real-time translation in emails and instant messages
3. Writing Assistant: CoPilot helps you create clear and understandable emails by suggesting tone of voice adjustments and identifying potential errors to improve the quality of your messages.
4. Daily inbox digest: every morning, CoPilot provides a concise summary of new emails from the last 24 hours.
